

The background of the entire page is an underwater scene. On the left, a diver is visible, partially obscured by the darkness and the presence of rocks. The water is a deep blue, and the rocks are dark and jagged. A horizontal dotted line in a light blue color spans the width of the page, starting from the right edge of the 'DRYSUIT LAYERS' text and extending to the right edge of the frame.

DRYSUIT LAYERS

When it comes to thermal protection, we offer a wide variety of choice and layering options. Our selection of layers enables the diver to create modular systems that allows for the assembly of one, two, or more garments to meet the thermal protection requirements over a broad range of water temperature, dive duration and personal comfort level.

SB SYSTEM BASE LAYER TOP + PANT

This base layer is made from an advanced stretch breathable fabric that draws moisture away from the body creating a dry zone next-to-skin barrier. It then disperses the moisture over a larger surface allowing it to evaporate quickly.

MATERIAL

- › Stretch breathable fabric made from a blend of polyester/polypropylene/spandex. Includes Polartec Power Dry® technology and is anti-microbial.

INNOVATION

- › Two layer fabric draws moisture away from the body creating a dry zone next- to-skin barrier and then disperses the moisture over a large surface allowing it to evaporate quickly.

FEATURES

- › Form-fitting base layer includes moisture management technology that acts as the first stage in moisture movement away from the skin
- › Incorporates quick drying characteristics for rapid evaporation, keeping you dry and comfortable
- › Includes anti-microbial properties that inhibit bacterial growth, keep the fabric fresh and provide odor control
- › Two piece design allows the diver to mix and match sizes of top and pant for perfect fit
- › Designed to be used as part of the SB SYSTEM or as standalone garments

TOP FEATURES

- › Molded comfort collar reduces neck chaffing. Includes BARE embroidered logo
- › Zippered stretch pocket at right upper arm for key/ID
- › Low profile thumb loops to assist donning

PANT FEATURES

- › Women's pant features a women's specific contoured elastic waistband designed to hold the top in position when crouching
- › Zipper fly closes downward to allow for a pee valve relief tube (men's version only)
- › Zippered stretch pocket at right thigh for key/ID
- › Lycra stirrups keep pants in place when donning mid layer & drysuit

SB
SYSTEM

SB SYSTEM MID LAYER FULL

Made from an advanced stretch breathable compression-resistant fleece, this one piece mid layer provides warmth without bulk. It also maintains insulating values at changing depths allowing the diver's core temperature to remain stable.

MATERIAL

- › Stretch breathable and compression resistant made from polyester/spandex anti-microbial fleece. Includes Polartec Power Stretch® technology.

FEATURES

- › High 4-way stretch fleece means garment is form-fitting and reduces bulk and lead weight requirements compared to non-stretch fleece undergarments
- › Extra-long diagonal front zipper with "2-way convenience" to allow insertion of pee valve relief tube
- › Includes moisture management technology that acts as the second stage in moisture movement away from the skin
- › Incorporates quick drying characteristics for rapid evaporation keeping you dry and comfortable
- › Low profile thumb loops to assist donning
- › Zippered stretch pocket laminated to left waist for key/ID
- › Lycra stirrups keep pants in place when donning drysuit
- › Flatseam stitching throughout
- › Designed to be used as part of the SB SYSTEM or as a standalone garment

SB SYSTEM MID LAYER TOP + PANT + VEST

Made from an advanced stretch breathable compression-resistant fleece, this two piece mid layer provides warmth without bulk. It also maintains insulating values at changing depths allowing the diver's core temperature to remain stable. Add the vest for additional thermal protection on colder dives.

MATERIAL

- › Stretch breathable and compression resistant made from polyester/spandex anti-microbial fleece. Includes Polartec Power Stretch® technology.

FEATURES

- › High 4-way stretch fleece means garment is form-fitting and reduces bulk and lead weight requirements compared to non-stretch fleece undergarments
- › High warmth-to-weight ratio delivers the exact warmth and breathability required for dive applications
- › Includes moisture management technology that acts as the second stage in moisture movement away from the skin
- › Incorporates quick drying characteristics for rapid evaporation, keeping you dry and comfortable
- › Two piece design allows the diver to mix and match sizes of top and pant for perfect fit
- › Designed to be used as part of the SB SYSTEM or as standalone garments

TOP FEATURES

- › Molded comfort collar reduces neck chaffing
- › Zippered stretch pocket at right upper arm for key/ID
- › Low profile thumb loops to assist donning
- › Lower body constructed of lighter weight fabric to reduce bulk when tucked in

PANT FEATURES

- › Women's pant features a women's specific contoured elastic waistband designed to hold the top in position when crouching
- › Elastic waistband with drawstring and cordlock keeps the top in position when crouching
- › Zipper fly closes downward to allow for a pee valve relief tube (men's version only)
- › Zippered stretch pocket at right thigh for key/ID
- › Lycra stirrups keep pants in place when donning drysuit

VEST FEATURES

- › Center front zipper for easy entry
- › Hand warmer zippered pockets with fleece lining

SUPER HI-LOFT POLARWEAR EXTREME

A more traditional underwear offering, this mid layer includes double hi-loft Thinsulate in the torso and single hi-loft in the arms and legs. The Rip Stop nylon exterior makes this product very durable. A great layer for colder dives.

FEATURES

- › Super soft Rip Stop nylon exterior with double hi-Loft THINSULATE (14.8oz/yd2 / 500g/m2) insulated interior in torso and Single Hi-Loft (7.4oz/yd2 / 250g/m2) in arms and legs
- › Extra long front zipper ("2-way" convenience for men and rear "drop seat" zipper for women)
- › HYDROSTRETCH panels in critical areas for ease of movement and LUMBARE-X-TENDER panel in lower back
- › Ribbed knit cuffs & collar for secure comfort and fit
- › Hand warmer pockets
- › Foot stirrups and thumb loops for donning ease
- › Articulated knees

was created

HI-LOFT POLARWEAR EXTREME

Similar to the Super Hi-Loft, but without the additional layer of Thinsulate in the torso.

FEATURES

- › Super soft Rip Stop nylon exterior with hi-loft THINSULATE (7.4oz/yd2 / 250g/m2) insulated interior
- › Extra long front zipper ("2-way" convenience for men and rear "drop seat" zipper for women)
- › HYDROSTRETCH panels in critical areas for ease of movement and LUMBARE-X-TENDER panel in lower back
- › Ribbed knit cuffs & collar for secure comfort and fit
- › Hand warmer pockets
- › Foot stirrups and thumb loops for donning ease
- › Embroidered BARE chest pocket with zipper

CT200 POLARWEAR EXTREME

This layer uses low-loft Thinsulate that is less bulky, but still extremely effective insulation for everything but the coldest dives.

FEATURES

- › Super soft Rip Stop nylon exterior with B200 THINSULATE (6.2oz/yd2 / 210g/m2) insulated interior
- › Extra long front zipper ("2-way" convenience for men and rear "drop seat" zipper for women)
- › HYDROSTRETCH panels in critical areas for ease of movement and LUMBARE-X-TENDER panel in lower back
- › Ribbed knit cuffs & collar for secure comfort and fit
- › Hand warmer pockets
- › Foot stirrups and thumb loops for donning ease
- › Articulated knees

T100 POLARWEAR

Using low-loft Thinsulate, this layer is a great choice for diving in temperate waters.

FEATURES

- › Super soft Rip Stop nylon exterior with C100 THINSULATE (3.1oz/yd2 / 105g/m2) insulated interior
- › Extra long front zipper (with "2-way" convenience)
- › HYDROSTRETCH panels in critical areas for ease of movement and LUMBARE-X-TENDER panel in lower back
- › Ribbed knit cuffs & collar for secure comfort and fit
- › Hand warmer pockets
- › Foot stirrups and thumb loops for donning ease
- › Articulated knees

DRYSUIT LAYERING RECOMMENDATION CHART

With the introduction of the new SB SYSTEM, BARE offers even more choice and several layering options. This enables divers to create modular layered systems that allow the assembly of one, two, or more garments to meet the thermal protection requirements over a broad range of water temperature, dive duration and comfort level based on personal metabolism.

These recommendations are a guide only. Divers should base the final decision on personal knowledge of their diving conditions and preference.

Refer to the chart below to find the recommended BARE layers for your drysuit and diving conditions.

*For thermal and moisture control, BARE recommends the use of the SB SYSTEM Base Layer to enhance the performance of ALL BARE drysuit undergarments. The SB SYSTEM Mid Layer Vest is a final addition to provide an extra degree of warmth on your coldest dives.

Remember that each layer consumes some of the available room inside the suit. Make sure the chosen drysuit has enough room to allow freedom of movement even when wearing the thickest combination of undergarments. It is not at all uncommon for a diver to wear a suit size one up from the undergarment size.

The BARE drysuit undergarment range includes several varieties of proven insulating materials. In our quest for warmth without bulk, we have added the SB SYSTEM Base Layer and SB SYSTEM Mid Layer categories. Initially designed to specifically complement the stretch of the new SB SYSTEM, we have found that climate and moisture control, stretchability in the entire garment, and high warmth to bulk ratio boost the performance of the entire range of BARE drysuits.

The new recommendation charts take these advanced products into consideration.

STEP 1

Along the top of the chart, choose the model of drysuit you own or are about to purchase.

STEP 2

Move down the chart and select the temperature range for your local diving conditions or the temperature range you dive most often. There are two columns of options that will work for each temperature range.

OPTION A:

With the introduction of the new SB SYSTEM, we recommend a combination of base and mid layers for use under any suit category.

OPTION B:

A combination of more traditional Thinsulate garments that BARE divers have enjoyed for years, and SB SYSTEM layers.

DRYSUIT MEASURING TIPS

1. When measuring customer for a STOCK size drysuit, customer should wear minimal clothing.
2. Select size from above charts.
3. Drysuit design already accommodates appropriate underwear choice, as long as the diver is not at the upper end of the weight and height range for the size selected.
